

MARKING CURVED RESIN SURFACE BY UV LASER GIVING MARKS WITH SHARP EDGES - INVOLVES IRRADIATING UV LASER ON PORTION TO BE MARKED, COATING PAINT, ADHERING TACKY TAPE AND STRIPPING TAPE FROM PORTION TO BE MARKED

Patent Assignee: ROHM CO LTD (ROHL)

Abstract: JP 08294667 A

Marking on curved surface of a polymer resin comprises irradiating UV laser on the portions to be marked, coating point on the portion including the portions to be marked, adhering a tacky tape on the coated portion and stripping the tape off from the position. Also claimed is a polymer resin member having, on the curved surface, marked portions treated by UV laser and coated by paint.

ADVANTAGE - Curved surface is easily treated and marks with sharp edges are formed.
